

Strategy

The fund predominantly invests in US Dollar denominated investment grade corporate bonds of Asian domiciled issuers. It seeks to deliver attractive income, low volatility and diversification from equity for investors. The fund may take advantage of tactical allocations to Asian local currency markets as a means of generating returns. Emphasis is put on bottom up issuer selection and ensuring adequate diversity due to the asymmetric nature of corporate bond returns. The fund is managed according to Fidelity's active philosophy and approach to fixed income investing. This is team-based, but led by the Portfolio Manager to generate attractive risk-adjusted returns through combining multiple, diversified investment positions advised by in-house fundamental credit research, quantitative modelling and specialist traders.

Objectives & Investment Policy

- The fund aims to provide income and capital growth.
- The fund will invest at least 70% into investment grade bonds of issuers that have their main business activities in Asia.
- This region includes countries considered to be emerging markets.
- Less than 30% of the fund's total net assets will be invested in hybrids and Cocos, with less than 20% of the total net assets to be invested in Cocos.
- The fund can invest in bonds issued by governments, companies and other bodies.
- The fund has the freedom to invest outside its principal geographies, market sectors, industries or asset classes.
- The fund's exposure to Distressed Securities is limited to 10% of its assets.
- The fund may invest in assets directly or achieve exposure indirectly through other eligible means including derivatives. The fund can use derivatives with the aim of risk or cost reduction or to generate additional capital or income, including for investment purposes, in line with the fund's risk profile.
- Investments may be made in currencies other than the fund's reference currency. Exposure to currencies may be hedged, for example with currency forward contracts. The fund's reference currency is the currency used for reporting and may be different from the currency of denomination of the investments.
- The fund is actively managed. The Investment Manager will, when selecting investments for the fund and for the purposes of monitoring risk, reference ICE BofA Asia Dollar Investment Grade Index (the "Index"). The fund's performance can be assessed against its Index. The Investment Manager has a wide range of discretion relative to the Index. While the fund will hold assets that are components of the Index, it may also invest in issuers, sectors, countries and security types that are not included in, and that have different weightings from, the Index in order to take advantage of investment opportunities.
- Income earned by the fund is paid to shareholders out of gross investment income for most of the time. The fund seeks to maintain a stable payment per share so far as is reasonable. The payment is not fixed and will vary according to economic and other circumstances, and the ability of the fund to support stable payments without a long-term positive or negative impact on its capital. This may occasionally result in income payment coming out of the capital.
- Shares can usually be bought and sold each business day of the fund.

Fund Facts

Launch date: 18.04.11
Portfolio manager: Belinda Liao, Eric Wong, Morgan Lau
Appointed to fund: 01.07.19, 01.10.13, 02.01.19
Years at Fidelity: 6, 10, 4
Fund size: \$1,731m
Fund reference currency: US Dollar (USD)
Fund domicile: Luxembourg
Fund legal structure: SICAV
Management company: FIL Investment Management (Luxembourg) S.A.
Capital guarantee: No
Portfolio Turnover Cost (PTC): 0.00%
Portfolio Turnover Rate (PTR): 123.99%

Share Class Facts

Other share classes may be available. Please refer to the prospectus for more details.

Launch date: 03.03.16
NAV price in share class currency: 7.995
ISIN: LU1371569200
SEDOL: BYY7LW3
Bloomberg: FFAAMIU LX
Dealing cut-off: 12:00 UK time (normally 13:00 Central European Time)
Distribution type: Income
Distribution frequency: Monthly
Ongoing Charges Figure (OCF) per year: 1.04% (30.04.22)
OCF takes into account annual management charge per year: 0.75%

Independent Assessment

Information is the latest available at date of publication. See Glossary for further details. As some ratings agencies may use past performance to produce their assessments, these are not a reliable indicator of future results.

Morningstar Rating: ****
 Scope Rating: (B)

Share Class Risk and Reward Profile

This risk indicator is taken from the key information document at the relevant month-end. Because it may be updated during a month, please refer to the key information document for the most up-to-date information.

- The risk category was calculated using historical performance data.
- The risk category may not be a reliable indication of the future risk profile of the fund, is not guaranteed and may change over time.
- The lowest category does not mean a "risk free" investment.
- The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

Important Information

The value of your investment may fall as well as rise and you may get back less than you originally invested. The use of financial derivative instruments may result in increased gains or losses within the fund. This fund invests in emerging markets which can be more volatile than other more developed markets. Liquidity is a measure of how easily an investment can be converted into cash. Under certain market conditions assets may be more difficult to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner. There is a risk that the issuers of bonds may not be able to repay the money they have borrowed or make interest payments. When interest rates rise, bonds may fall in value. Rising interest rates may cause the value of your investment to fall. The investment policy of this fund means it can be more than 35% invested in Government and public securities. These can be issued or guaranteed by other countries and Governments. For a full list please refer to the fund's prospectus.

Past performance is not a reliable indicator of future results. The fund's returns can be affected by fluctuations in currency exchange rates.

Performance Comparator(s)

Peer Group Universe	Morningstar EAA Fund Asia Bond
Market index from 03.03.16	ICE BofA Asia Dollar Investment Grade Index

Market index is for comparative purposes only unless specifically referenced in the Objectives & Investment Policy on page 1. The same index is used in the positioning tables on this factsheet. Where the effective date for the current market index is after the share class launch date, full history is available from Fidelity.

Cumulative performance in USD (rebased to 100)

Performance is shown for the last five years (or since launch for funds launched within that period).

Performance for calendar years in USD (%)

Performance to 30.09.22 in USD (%)

	1m	3m	YTD	1yr	3yr	5yr	Since 03.03.16*

Total number of funds	69	69	65	63	45	31	
Quartile ranking**	4	3	2	2	1	2	

Source of fund performance and volatility and risk measures is Fidelity. Performance is excluding initial charge. Basis: nav-nav with income reinvested, in USD, net of fees. If you took an initial charge of 5.25% from an investment, this is the equivalent of reducing a growth rate of 6% per annum over 5 years to 4.9%. This is the highest initial charge applicable, if the initial charge you pay is less than 5.25%, the impact on the overall performance will be less. Market indices are sourced from RIMES and other data is sourced from third-party providers such as Morningstar.

*Performance commencement date.

**Quartile rank is for the fund's primary share class as identified by Morningstar, which may be different than the share class detailed in this factsheet and refers to performance over time rated on a scale of 1-4. A ranking of 1 indicates that the item being ranked is in the top 25% of the sample and so on. Rankings are based on a performance record that is included in the Peer Group Universe. In line with Investment Association methodology, this record may include a track record extension from a legacy share class and the record may not be the same class of this factsheet. Quartile ranking is an internal Fidelity International calculation. Ranking may vary by share class.

Security Holdings as a percent of total net assets. Contribution to duration (CTD) and contribution to duration-times-spread (DTS) are in the appropriate units of measure. CTD and DTS include the effect of derivatives. 'FX / Derivative P&L' includes collateral balances with counterparties arising from derivatives used in the fund (this can lead to a negative balance).

Top 10 Long Exposures By Issuer

	Fund	Index	Relative
(PHILIP) Republic Of Philippines	7.22	3.85	3.38
(HAOHUA) Cnac Hk Finbridge Co Ltd	5.21	0.86	4.34
(HRINTH) Huarong Finance 2019	5.02	1.12	3.90
(HYNMTR) Hyundai Capital America	3.97	0.00	3.97
(SANLTD) Sands China Ltd	3.31	0.77	2.53
(PSALM) Power Sector Assets & Li	3.30	0.21	3.09
(TENCNT) Tencent Holdings Ltd	3.28	2.08	1.20
(MEITUA) MEITUAN 2.125% 10/28/25 RGS	3.17	0.19	2.97
(NECELE) RENESAS ELECT 2.17% 11/26 RGS	2.84	0.00	2.84
(LENOVO) LENOVO GRP 3.421% 11/02/30 RGS	2.80	0.25	2.55

Top long exposures are those bond issuers that reflect the largest percentage of the fund's total net assets. The effect of credit derivatives is included where the reference entity is a specific bond issuer. Government bond futures and index credit default swaps are excluded. Where bonds are issued by different entities within the same corporate group/complex, the aggregated exposure may not be reflected in the data above.

(BABA) Alibaba Group Holding	0.00	1.45	-1.45

Top overweights and underweights are those bond issuers that have the largest active positions relative to the index holding. The effect of credit derivatives is included where the reference entity is a specific bond issuer. Government bond futures and index credit default swaps are excluded.

ESG Metrics

The factsheet is a snapshot of the portfolio at the date indicated above. ESG ratings distribution may vary over time. Representation of this data is for informational purposes only. If the SFDR classification is shown as 6 below then this fund does not promote environmental or social characteristics nor does it have a sustainable investment objective. If it is shown as 8, the fund promotes environmental or social characteristics. If it is shown as 9, the fund has a sustainable investment objective. Product-specific information can be found on our website at www.fidelityinternational.com

Sustainability Characteristics (30.09.2022)

	Fund	Index
MSCI ESG Fund Rating (AAA-CCC)	BB	N/R
Weighted Average Carbon Intensity (tCO ₂ e/\$M Revenue)	302.8	456.3
Carbon Footprint (tCO ₂ /\$M Invested)	106.4	159.1
SFDR Classification	6	N/A

N/A - Not Applicable
 N/R - Not Rated

MSCI Ratings Distribution % (30.09.2022)

Glossary

MSCI ESG Fund Rating: This shows the fund's ESG rating based on the Quality Scores given to the fund by MSCI. This ranges from AAA, AA (Leader), A, BBB, BB (Average) to B, CCC (Laggard). To be included in MSCI ESG Fund Ratings, 65% of the fund's gross weight must come from covered securities (and excluding cash), the fund's holdings date must be less than one year old and the fund must have at least ten securities.

Weighted Average Carbon Intensity: is calculated as the sum of each portfolio weight multiplied by the Co2e per \$M of Revenue of each holding. This metric provides a snapshot of the fund's exposure to carbon-intensive companies and includes scope 1 and scope 2 carbon emissions. For carbon data, the coverage of underlying securities must be over 50% for data to be shown.

Carbon Footprint: Provides a normalized snapshot of the funds contribution to carbon emissions.

SFDR Classification: Shows the classification given to each fund as part of the EU Sustainable Finance Disclosure Regulation (SFDR). Article 9 funds aim to achieve an ESG outcome and are products with ESG objectives. Article 8 funds focus on promoting ESG characteristics and this must be a primary focus of the product. Article 6 funds integrate sustainability risks into investment analysis and decision-making, without the funds promoting environmental or social characteristics or having sustainable investments as their objective.

MSCI Ratings Distribution: This shows the percentage distribution of ESG ratings in the fund, based on the Net Asset Value of holdings excluding cash, liquidity funds, derivatives and Exchange Traded Funds.

The information is as at the date of production based on carbon data provided by ISS. There may be timing differences between the date at which data is captured and reported.

SFDR Classification is assigned by Fidelity in line with the EU Sustainable Financial Disclosure Regulation.

Glossary

Volatility & Risk

Annualised volatility: a measure of how variable returns for a fund or comparative market index have been around their historical average (also known as “standard deviation”). Two funds may produce the same return over a period. The fund whose monthly returns have varied less will have a lower annualised volatility and will be considered to have achieved its returns with less risk. The calculation is the standard deviation of 36 monthly returns presented as an annualised number. Volatility for funds and indices are calculated independently of each other.

Relative volatility: a ratio calculated by comparing the annualised volatility of a fund to the annualised volatility of a comparative market index. A value greater than 1 indicates the fund has been more volatile than the index. A value less than 1 shows the fund has been less volatile than the index. A relative volatility of 1.2 means the fund has been 20% more volatile than the index, while a measure of 0.8 would mean the fund has been 20% less volatile than the index.

Sharpe ratio: a measure of a fund’s risk-adjusted performance, taking into account the return on a risk-free investment. The ratio allows an investor to assess whether the fund is generating adequate returns for the level of risk it is taking. The higher the ratio, the better the risk-adjusted performance has been. If the ratio is negative, the fund has returned less than the risk-free rate. The ratio is calculated by subtracting the risk-free return (such as cash) in the relevant currency from the fund’s return, then dividing the result by the fund’s volatility. It is calculated using annualised numbers.

Annualised alpha: the difference between a fund’s expected return (based on its beta) and the fund’s actual return. A fund with a positive alpha has delivered more return than would be expected given its beta.

Beta: a measure of a fund’s sensitivity to market movements (as represented by a market index). The beta of the market is 1.00 by definition. A beta of 1.10 shows that the fund could be expected to perform 10% better than the index in up markets and 10% worse in down markets, assuming all other factors remain constant. Conversely, a beta of 0.85 indicates that the fund could be expected to perform 15% worse than the market return during up markets and 15% better during down markets.

Annualised tracking error: a measure showing how closely a fund follows the index to which it is being compared. It is the standard deviation of the fund’s excess returns. The higher the fund’s tracking error, the higher the variability of fund returns around the market index.

Information ratio: a measure of a fund’s effectiveness in generating excess return for the level of risk taken. An information ratio of 0.5 shows the fund has delivered an annualised excess return equivalent to half the value of the tracking error. The ratio is calculated by taking the fund’s annualised excess return and dividing it by the fund’s tracking error.

R2: a measure representing the degree to which a fund’s return can be explained by the returns of a comparative market index. A value of 1 signifies the fund and index are perfectly correlated. A measure of 0.5 means only 50% of the fund’s performance can be explained by the index. If the R2 is 0.5 or lower, the fund’s beta (and therefore its alpha too) is not a reliable measure (due to a low correlation between fund and index).

Ongoing charges

The ongoing charges figure represents the charges taken from the fund over a year. It is calculated at the fund’s financial year end and may vary from year to year. For classes of funds with fixed ongoing charges, this may not vary from year to year. For new classes of funds or classes undergoing corporate actions (eg amendment to annual management charge), the ongoing charges figure is estimated until the criteria are met for an actual ongoing charges figure to be published.

The types of charges included in the ongoing charges figure are management fees, administration fees, custodian and depositary fees and transaction charges, shareholder reporting costs, regulatory registration fees, Directors fees (where applicable) and bank charges. It excludes: performance fees (where applicable); portfolio transaction costs, except in the case of an entry/exit charge paid by the fund when buying or selling units in another collective investment undertaking.

For more information about charges (including details of the fund’s financial year end), please consult the charges section in the most recent Prospectus.

Independent Assessment

Scope Fund Rating: The rating measures how well a fund has balanced risk and reward relative to its peers. The rating is based solely on performance for funds with a five year track record. Funds with a shorter history also undergo qualitative assessment. For example, this may include looking at management style. The rating scale is A = very good, B = good, C = average, D = below average and E = poor.

Morningstar Star Rating for Funds: The rating measures how well a fund has balanced risk and reward relative to its peers. Star ratings are strictly based on past performance and Morningstar suggests investors use them to identify funds that are worthy for further research. The top 10% of funds in a category will receive a 5-star rating and the next 22.5% receive a 4-star rating. Only ratings of 4 or 5 stars are displayed on the factsheet.

Primary share class: is identified by Morningstar when the analysis calls for only one share class per fund to be in the peer group. It is the share class Morningstar recommends as the best proxy for the portfolio for the relevant market and category/GIF combination. In most cases the share class chosen will be the most retail version (based upon actual management charge, inception date, distribution status, currency and other factors) unless a share class that is less retailed focused has a much longer track record. It is different to the oldest share class data point in that it is on an available for sale level and not all markets will have the oldest share class for sale in that region. The Primary share class is also based on category so each available for sale/category combination for the fund will have its own primary share class.

Glossary

Portfolio Characteristics

Distribution Yield (%)

The Distribution Yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of the mid-market unit price of the fund as at the date shown and is based on a snapshot of the portfolio on that day. It includes the fund's ongoing charges but does not include any preliminary charge and investors may be subject to tax on distributions.

Effective Duration

Duration is a measure of sensitivity of the fund value to changes in interest rates.

Effective duration is a duration calculation for bonds with embedded options (such as a call or a put option). It takes into account that expected cash flows will fluctuate as interest rates change and affect a bond's price.

The effective duration of a fund is calculated by a market weighted sum of the effective duration of each individual instrument. The effect of derivatives such as bond futures and interest rate swaps are included in the calculation.

Running Yield (%)

Describes the income investors get from their portfolio as a percentage of market value of the securities, incorporating the effect of derivatives. It should not be relied on as a measure of expected fund return (or distribution). Bonds with high probability of default are excluded from the calculation. The running yield does not reflect the total return over the life of the bond and takes no account of reinvestment risk (the uncertainty about the rate at which future cash flows can be reinvested) or the fact that bonds usually mature at par value, which can be an important component of a bond's return. The running yield does not include the impact of fees.

Yield to Maturity (%)

The Yield to Maturity (also known as the Redemption Yield) is the aggregate of all anticipated returns on each individual bond within the portfolio expressed as an annual rate based on market value as at date shown, coupon rate and time to maturity of each bond. It is based on a snapshot of the portfolio on that date. The redemption yield is gross of the fund's charges and gross of tax.

Average Maturity (Years)

The market-weighted average maturity of bonds held in the portfolio. Perpetual bonds are assigned a maturity of 31 December 2049. Derivatives are excluded from the calculation.

Average Coupon (%)

The coupon is the interest rate stated on a bond when it is issued. Average Coupon is the weighted average coupon of bonds held in the portfolio. Derivatives are excluded from the calculation.

Spread Duration

The sensitivity of the price of a bond to a change in its Option Adjusted Spread.

Option Adjusted Spread (Basis Points)

Option Adjusted Spread (OAS) measures the yield spread that is not directly attributable to the bond's characteristics. OAS is a measurement tool for evaluating price differences between similar bonds with different embedded options. A larger OAS implies a greater return for greater risks.

Duration Times Spread (DTS)

DTS is a measure of credit risk sensitivity that utilises credit spread and credit spread duration based on current market valuations. It is superior to spread duration as a standalone measure of credit risk because it recognises that securities with a higher spread tend to experience greater spread changes. The portfolio's DTS is the value weighted sum of the DTS of each individual instrument.

Number of Holdings

The number of bonds and derivatives held in the fund. Where the fund invests in another fund, it is counted as one holding. FX (foreign exchange) forwards are excluded. These are forward contracts that allow currency to be bought or sold at an agreed price on a future date.

Number of Names

The total number of individual issuers whose bonds are held in the fund. Since the fund will often hold more than one bond from an issuer, this figure is generally lower than the number of holdings.

Average Credit Rating

This is the weighted average of all the bond credit ratings in the fund, expressed using the industry standard letter system (ie AAA, BBB). It takes into account all investments in the fund, including derivatives. This measure gives an idea of how risky the fund's bonds are overall; the lower the average credit rating, the riskier the fund.

With a Linear weighted average, the weight assigned to each issue is equal to its market value weight. With an Exponential weighted average, the weight gets proportionally higher for lower-quality credit. In both calculations, the final value is the S&P-equivalent rating nearest to the calculated average.

Primary share class: is identified by Morningstar when the analysis calls for only one share class per fund to be in the peer group. It is the share class Morningstar recommends as the best proxy for the portfolio for the relevant market and category/GIF combination. In most cases the share class chosen will be the most retail version (based upon actual management charge, inception date, distribution status, currency and other factors) unless a share class that is less retailed focused has a much longer track record. It is different to the oldest share class data point in that it is on an available for sale level and not all markets will have the oldest share class for sale in that region. The Primary share class is also based on category so each available for sale/category combination for the fund will have its own primary share class.

Portfolio Turnover Rate (PTR) and Portfolio Turnover Cost (PTC), where shown: SRDII does not define a methodology for these values; ours is as follows: **PTR** = (purchases of securities + sales of securities) minus (subscriptions of units + redemptions of units), divided by average fund value over the prior 12 months multiplied by 100. Any funds' trading in Fidelity Institutional Liquidity Funds is excluded from the PTR calculation. **PTC** = PTR (capped at 100%) x transaction cost, where transaction cost is calculated as ex-post (i.e. prior 12 months) MIFID disclosure of portfolio transaction costs minus implicit costs.

Important Information

This information must not be reproduced or circulated without prior permission. Fidelity International refers to the group of companies which form the global investment management organisation that provides information on products and services in designated jurisdictions outside of North America. Fidelity only offers information on its own products and services and does not provide investment advice based on individual circumstances, other than when specifically stipulated by an appropriately authorised firm, in a formal communication with the client. This communication is not directed at, and must not be acted upon by persons inside the United States and is otherwise only directed at persons residing in jurisdictions where the relevant funds are authorised for distribution or where no such authorisation is required.
