[†] Effective duration is calculated using time (years) to reset for floating rate holdings and effective duration (source: Bloomberg) for fixed rate bonds.

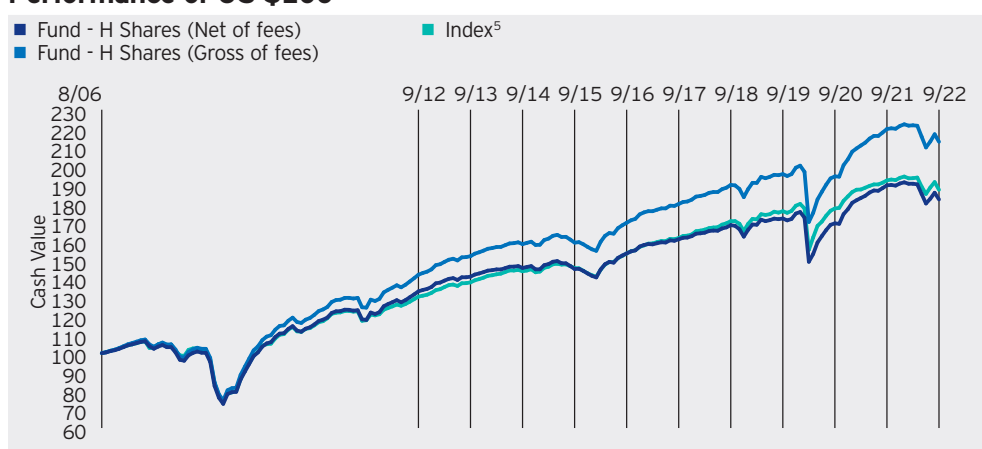

Investment objective

To provide a high level of current income, consistent with the preservation of capital, by investing primarily in adjustable rate senior loans whose interest rates float at a spread above Libor and reset on average approximately every 60 days organized or located in the United States or Canada. The benchmark index is shown for performance comparisons purposes only. The fund is actively managed and does not track the index. The investment concerns the acquisition of units in a fund and not in a given underlying asset.

Investment strategy

- The fund invests primarily in senior, secured loans to non-investment grade corporations with interest rates that float at a spread above Libor, resets about every 60 days.
- Invesco seeks to invest in loans to companies which in its judgment exhibit mature and stable operating profiles, with dependable cash flow generation and strong asset coverage.
- To manage risk, the team keeps the portfolio broadly diversified and generally avoids industries they believe to be fundamentally flawed or speculative.

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Current tax levels and reliefs may change. Depending on individual circumstances, this may affect investment returns. As with all investments, there are associated inherent risks. The fund is particularly dependent on the analytical abilities of its investment manager on senior loans. Many senior loans are illiquid, meaning that the fund may not be able to sell them quickly at a fair price and/or that the redemptions may be delayed due to illiquidity of the senior loans. The market for illiquid securities is more volatile than the market for liquid securities. The market for senior loans could be disrupted in the event of an economic downturn or a substantial increase or decrease in interest rates. Senior loans, like most other debt obligations, are subject to the risk of default.

For important information on risks associated with this product, see the "Risk Factor" section in Appendix I of the Prospectus.
